General Contractor for New Portneuf Medical Center Announced

Pocatello, Idaho (May 7, 2009)—Legacy Hospital Partners, Inc. announced plans today to construct the new Portneuf Medical Center at 777 Hospital Way in Pocatello, Idaho.

Layton Construction Company, headquartered in Sandy, Utah, with regional offices in several states, including Boise, Idaho, has been selected as construction manager and general contractor.

The new hospital will bring the highest levels of healthcare service to Pocatello to parallel the growth of the area and to keep pace with the advances of health care technologies. The new hospital, larger than 300,000 square feet, will house 187 acute care beds, a 25 bed emergency department, and 16 newborn intensive care (NICU) beds. Among a full range of healthcare services offered are cardiovascular, oncology, pediatrics, orthopedics, MRI, CT and nuclear medicine services.

“Legacy Hospital Partners, Inc. (LHP) is very pleased to announce that Layton Construction Company has received the contract to oversee the construction of the new Portneuf Medical Center. Construction will begin in June and we expect to open the facility in the summer of 2011. Layton has an excellent track record in building hospitals and everyone at LHP has great confidence in their ability to get the job done,” said Ed Davidson, LHP Vice President of Construction and Design.

Layton Construction is currently building healthcare facilities in Idaho in Idaho Falls and Gooding. “Layton is committed to hire qualified subcontractors from the local community to create jobs and build the local economy. We always work to become part of the fabric of the communities in which we work. We look forward to a positive experience with the business and healthcare community in Pocatello,” said Mike McDonough, Layton’s Vice President of Healthcare Construction.

Layton Construction is also recognized by *Modern Healthcare* Magazine as the 18th largest healthcare construction management company in the United States, and is currently constructing healthcare facilities in Utah, Arizona, California and Wyoming.
